

Spraying Systems Co.®

Mobile Sanitization Cart

The Mobile Sanitization Cart provides a convenient and easy way to spray sanitizers in pharmaceutical clean rooms and related industries.

Benefits

1. Rapidly Increase Air Sterilization Agent Distribution

The Mobile Sanitization Cart produces ultrafine droplets measuring less than 10 μm . Smaller droplets improve the diffusion and shorten the evaporation time of the sprayed liquid, yielding an effective and speedy disinfection of clean rooms.

2. Flexible Configuration Facilitates Effective Sterilization

Utilizing four (4) directionally adjustable nozzles, The Mobile Sanitization Cart can be configured to accommodate any room layout. Additionally, the spray angle can be adjusted by changing the air pressure, thereby achieving a uniform distribution and preventing excessive or insufficient spray volume in different regions of the room.

3. Removable Control Box

The cart is fitted with a light weight, compact and easy to operate control box. Moreover, with our building block design, the control box can be taken out from the cart and put into a control room; allowing the operator the possibility of remotely and conveniently monitoring the sterilization process.

Mobile Sanitization Cart

4. Automatic Spray Control

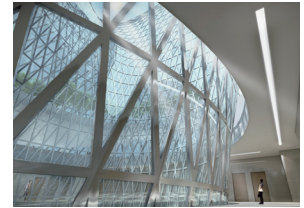

Time control: The spray time as well as the interval time can be easily set from the control panel, providing safe and automatic operation.

Specifications:

- The AutoJet Mobile Sanitizing cart wetted parts are 316 stainless steel.
- Pressure tank volume: 5 gal
- Size: 380mm x 450mm x 2300mm
- Cart Weight: 25kg
- Control panel: 300 mm x 400mm x150mm

IDEAL FOR

- Pharmaceutical Plant
- Hospital
- Public Area
