AUTOMATIC BRUSH SHOWER

AFFORDABLY AUTOMATE SHOWER CLEANING & REDUCE NOZZLE PLUGGING

Spraying Systems Co.®
Experts in Spray Technology
ELIMINATE MANUAL BRUSH OPERATION IN EXISTING APPLICATIONS & MANUAL CLEANING ENTIRELY IN NEW APPLICATIONS

If you have manual brush-type showers, our new motor/control package offers an economical way to eliminate the need for operator intervention to rotate the brushes. Retrofitting brush-type showers is fast and easy. In less than 10 minutes, the motor can be installed on the shower and the control unit mounted in a convenient location for operation. The unit can be set to clean at predetermined intervals, eliminating the need for any operator intervention. The unit can also be placed in manual mode, which enables the activation of individual brushes by an operator.

If you are experiencing nozzle plugging and haven’t yet invested in brush-type showers, our Automatic Brush Shower is an ideal solution. Maintenance time due to clogged nozzles can be eliminated. And, because the cleaning cycle occurs without interrupting operation, machine uptime is maximized.

BENEFITS

• Affordable, automated solution. Operator intervention is minimized or eliminated. No need to have workers climbing machines or rotating handwheels
• Suitable for use with all brush-type showers up to 3” in diameter
• Easy operation. Cleaning cycles occur automatically when used with the programmable timer. If not, activation requires a simple push of a button. The brushes wipe the nozzles and the dirty water is flushed away
• Control up to four showers with a single control unit. Options are available for controlling more Automatic Brush Showers with a single control unit upon request – the control panel can be integrated with the mill’s central control system via ethernet IP or used as a standalone control panel
• Easy installation. A brush header can be retrofitted from a manual wheel to automatic operation with just four bolts and an insert adaptor pin
• Virtually maintenance free. Aside from gear lubrication once a year, the Automatic Brush Shower requires no maintenance
**A CLOSER LOOK AT THE AUTOMATIC BRUSH SHOWER**

An internal rotating brush assembly scrubs the interior wall of the shower as well as each disc-type shower nozzle orifice or strainer to prevent clogging and help ensure long nozzle wear life. In just a few seconds, debris is swept away through the flush-out valve, restoring full liquid flow to the system without contaminating the sprayed surface. If multiple units are installed, the system will then sequence to the next unit. And, there’s no need to stop the system. The brushes operate without disruption to normal processes.

ShowerJet nozzles are most often used with our Automatic Brush Shower. A lock ring on the shower holds the nozzles in place. ShowerJet nozzles that produce a flat spray pattern have stainless steel orifices. Solid stream versions are available with ceramic or synthetic ruby orifices for longer wear life.

The control unit includes a PLC with touchscreen for easy operation. It can be used as a standalone control device or can be integrated with a central control system.

**SPECIFICATIONS**

Spraying Systems Co.

---

**FLUSH VALVE ASSEMBLY**

Brush-type shower with staggered brush sections installed at 120° intervals.

**SMART MOTOR**

IP 55 AC motor and cable mounted onto a gear drive.

**GEARED DRIVE UNIT**

Painted carbon steel control box.
AUTOMATIC BRUSH SHOWER SPECIFICATION WORKSHEET

To obtain a no obligation quotation on our new Automatic Brush Shower, please review the worksheet that follows and give us a call to discuss the specifications of your application. Download the entire worksheet at spray.com/specsheets

SHOWER INFORMATION

Qty. showers required: ____________________________

Pipe length (PL): ____________________________ (in./mm/degrees)

Theoretical coverage (TC): ____________________________

Support distance (SD): ____________________________

Bracket inlet (B1): ____________________________

Bracket outlet (B2): ____________________________

Shower height (SH): ____________________________

Spray angle (SA): ____________________________ (0, 15, 30, 45, 60, or 75 degrees)

Outlet angle (OA): ____________________________

End to edge (ED): ____________________________

End to motor side (EH) – min./max.: ____________________________

Nozzle spacing (NS): ____________________________

Inlet to nozzle (IL): ____________________________

Outlet to nozzle (OL): ____________________________

CONTROLLER INFORMATION

One Control Panel with ________________ Brush Header* (1, 2, 3, 4 or custom)

PLC Brand ________________ and Touchscreen* (Allen-Bradley™ w/ Ethernet IP or Siemens®)

(*Required)

First to last (FL): ____________________________

Pipe material: ____________________________ (316LSS or 304LSS)

Inlet type (M): ____________________________ (NPT or BSPT) (1.5, 2.0, 2.5, 3)

Outlet type/size: ____________________________ (Hose barb) / (1.5/2)

AutoBrush Mounting Side: ____________________________ (tending or drive side)

Oscillating stroke length*: ____________________________ (in. or mm)

Spray coverage: ____________________________ (single or double)

Qty. of nozzles: ____________________________

PROCESS CONDITIONS

Operating pressure*: ____________________________ (max 100 psi, 6.9 bar)

Total flow*: ____________________________ (gpm or lpm)

Operating temperature*: ____________________________ (*F or °C)

Liquid sprayed: ____________________________

 Defaults | Minimums
---|---
Il: 4.0' (101.6 mm) | Il: 4.0' (101.6 mm)
Sa: 60° | 40 psi (2.8 bar)
Inlet (M) NPT | Pipe size: 1-1/2'
Spray overlap: 1 | NS: 2.0' (50.8 mm)
OA: 0 (zero) | Materials: 316LSS
Temp. < 100 F (38°C) | Power Req’d: 240VAC/3ph/60Hz
Control Panel Mat'l: Painted Steel | Control Method: Auto Timer & Manual
