New Automated Panning System Provides Improved Product Quality and Reduced Operating Costs

Wheaton, IL, USA, February 2017 – The AccuCoat[®] Central Panning System provides simplified control and significant cost benefits for panning operations that are already using central fluid delivery and a hot water supply. The system ensures the proper coating weight is accurately and uniformly applied on the target – even if the spray time must be changed.

The AccuCoat System consists of a control panel with touch screen HMI and a fully jacketed liquid line and spray nozzle to ensure that optimal coating temperature is maintained. The system tracks weight additions during the dispensing period to ensure the proper coating weight is applied.

In addition to enhancing product quality, the system typically cuts batch times in half compared to manual ladling systems. The consumption of costly coatings is often reduced 50% or even more. The AccuCoat Central Panning System is ideal for chocolate coated centers, jelly beans and other hard candies. More information about the system is available in this [product video](#).
